Notes:

^{1.} Bank of America/Merrill Lynch (BAML) indices provided by Bloomberg Financial Markets. The total returns shown for periods longer than a year are the annualized returns for the stated period.

^{2.} Since inception performance for all portfolios other than 'BPCA Other Post Employment Benefits' and 'BPCPC Other Post Employment Benefits' is calculated from January 31, 2006 to present

^{3.} For the 'Reserve Fund,' the inception of the BAML 1-5 Year Treasury Index as the performance benchmark is July 31, 2013. For prior periods, the BAML 1-10 Year Treasury Index was utilized.

^{4.} Since inception performance for the 'BPCA Other Post Employment Benefits' is calculated from January 31, 2008 to present.

^{5.} Since inception performance for the 'BPCPC Other Post Employment Benefits' is calculated from February 12, 2010 to present.

Portfolio Summary

Portfolios are in compliance with the Authority's investment policy, diversified by sector and issuer and are of high credit quality.

Short-Term Funds

- Strategy was largely dictated by (1) fiscal year end liquidity requirements and (2) net cash inflows during the quarter totaling approximately \$34 million (2003 Pledged Revenue).
 - New cash invested in US Treasuries (approximately \$22 million) and high-quality commercial paper (approximately \$12 million) targeted to a November 13, 2014 maturity date.
 - As a result of matching new investments to a specific, short-term maturity date, the Pledged Revenue Fund ended the quarter with a duration of 0.04 years, compared to 0.29 years at the beginning of the quarter and the benchmark's duration of 0.15 years.
 - 100% of funds are scheduled to mature within the next 2 months to facilitate transfers between funds at the beginning of the upcoming fiscal year.
 - For the fiscal year ended October 31, 2014, the funds generated total returns of 0.08% to 0.12% versus the benchmark return of 0.04%.
 - Outperformance was primarily attributed to (1) investing to the maximum maturity limit allowed by liquidity needs to benefit from the steepness of the short-term yield curve and (2) allocations to high-quality commercial paper, both of which on average added incremental income and yield to the portfolios relative to the benchmark.

Longer-Term Funds

- The funds generated attractive returns during the quarter, as yields drove lower through October. Those portfolios managed to a 1-10 year benchmark outpaced those managed to a 1-5 year benchmark, as longer maturities benefitted more significantly from yield declines relative to their shorter, intermediate-term counterparts.
 - As Treasury yields declined through mid-October, gains were captured in a portion of Treasury holdings and proceeds reallocated into attractive supranationals and municipal obligations.
 - Duration posture remained defensive and relatively unchanged compared to the benchmark (in the 90% to 94% range, similar to recent quarters), which benefitted the portfolios as yields rebounded significantly through the final two weeks of October.
 - As in the past several quarters, diversification, specifically allocations to Government MBS, benefited performance as this sector has dominated performance relative to US Treasury and agency securities of similar duration.
- For the quarter, the Authority's Longer-Term portfolios generated strong absolute returns while slightly underperforming their respective benchmarks by an average of 5 basis points (0.05%), due largely to defensive duration positions as yields decreased during the quarter.

Notes:

- 1. Performance on trade-date basis, gross-of-fees in accordance with the CFA Institute's Global Investment Performance Standards.
- 2. Bank of America/Merrill Lynch (BAML) indices provided by Bloomberg Financial Markets. The total returns shown for periods longer than a year are the annualized returns for the stated period.
- 3. Duration is the change in the value of a security that will result from a 1% change in interest rates, stated in years.
- 4. Periodic performance numbers are presented both as the periodic return and on an annualized basis. The annualized return assumes the periodic return is compounded at the same rate and is presented for reference only. The actual annual return will be the result of chaining the most recent four quarterly returns.

5. Since inception performance for all portfolios other than 'BPCA Other Post Employment Benefits' and 'BPCPC Other Post Employment Benefits' is calculated from January 31, 2006 to present. For the 'Reserve Fund,' the inception of the BAML 1-5 Year Treasury Index as the performance benchmark is July 31, 2013. For prior periods, the BAML 1-10 Year Treasury Index was utilized. Since inception performance for the 'BPCA Other Post Employment Benefits' is calculated from January 31, 2008 to present. Since inception performance for the 'BPCPC Other Post Employment Benefits' is calculated from February 12, 2010 to present.

Section D – Market Commentary

Summary of Economic and Market Conditions

Summary

- While the U.S. economy continued its recovery through the quarter ended September 30th, global unrest, a very strong October jobs report, and uncertainty about future central bank policy—including actions of the Federal Reserve (Fed)—resulted in volatility in the bond and equity markets.
- Ten-year Treasury bond yields fell noticeably by October 31st compared to the end of the previous quarter ended July 31st. On the other hand, shorter-term rates were relatively unchanged.
- Geopolitical uncertainty continued to move the markets. Military conflicts in Ukraine and the Middle East, as well as weaker economic data in the euro zone and various emerging markets such as China and Brazil, factored significantly in investor sentiment.

Economic Snapshot

- Third-quarter (ended September 30th) gross domestic product (GDP) rose at an annual rate of 3.9%, a strong reading on the heels of a stronger release of 4.6% for the previous quarter-ended June 30th.
- The U.S. unemployment rate fell from 6.2% in July to 5.8% in October. While job growth has been impressive, wage growth has been weak and other measures such as the labor force participation rate and the number of part- time workers for economic reasons indicate lingering levels of underutilization.
- Housing market data was also a "glass half empty, glass half full" scenario, as housing-related indicators experienced a series of ups and downs over the past several months. Most recently, new-home sales reached the highest level since 2008, while existing-home sales had a small, unexpected decline.

Interest Rates

- The Federal Open Market Committee (FOMC) reaffirmed that its quantitative easing bond purchase program will end in October. At the same time, the FOMC released updated assessments of where individual participants judged the appropriate level for the federal funds rate at the end of the next few calendar years. Those assessments showed a surprisingly fast upward trajectory for short-term rates that are inconsistent with both Fed Chair Janet Yellen's public comments and persistently low current market rates.
- Inflation (as measured by the Consumer Price Index) unexpectedly decreased month over month in August. This marked the first decline in almost a year and a half. Inflation continues to run below the Fed's 2% target rate.
- Yields on intermediate-maturity (two- to five-year) Treasuries ended the quarter modestly lower. Longer maturities (10-30 years) fell more significantly relative to their shorter, intermediate-term counterparts, causing a flattening of the Treasury yield curve.

Sector Performance

- Fixed-income performance was strong for the quarter ended October 31st, as the precipitous decline in yields through the first two weeks of October more than offset the yield increases experienced through September and late October.
- Mortgage-backed securities have been one of the best-performing sectors over the past three and 12-month periods.
- Short-term markets continued to be driven by the Fed as well as new regulations affecting banks and money market funds.
